#### FOSDEM'25 x -X-WIKI

# LibreOffice-based document editing in XWiki through COOL

# Agenda

```
#1 XWiki
```

#2 Demo

#3 Integration with COOL

**#3.1** WOPI protocol

**#3.2** Authentication

**#3.3** POSTMessage API

#### #1 XWiki

#### #1 XWiki

- knowledge management software
- 20 years old company

wiki software, structured data, 1000+ extensions

full set of professional services, offered to 800+ clients

safe, scalable and reliable

true open source - all of our products are and always will be open source

### #2 Demo

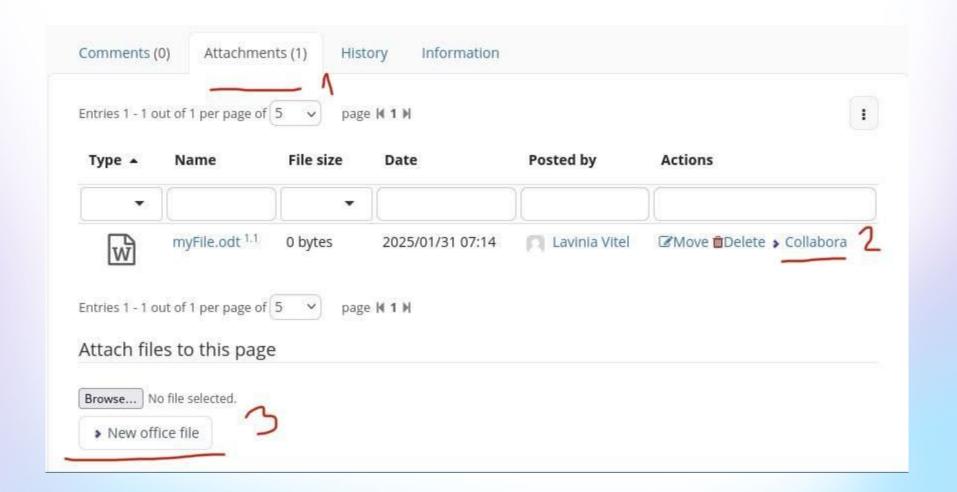

Click on "Edit" and modify the contents of this page, then click on "Save & View" to see how they look like on your page!

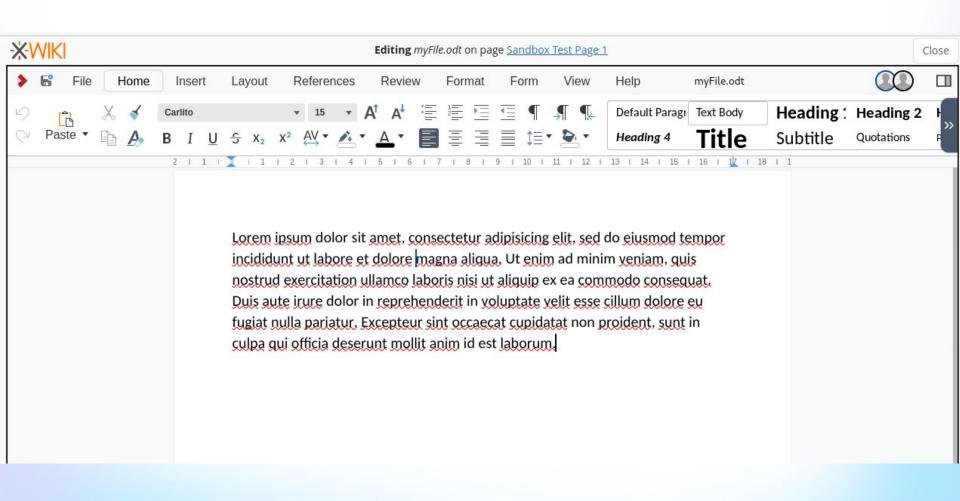

#### Here's some dummy text to show you what the page looks like

Lorem ipsum dolor sit amet, consectetur adipisicing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat. Duis aute irure dolor in reprehenderit in voluptate velit esse cillum dolore eu fugiat nulla pariatur. Excepteur sint occaecat cupidatat non proident, sunt in culpa qui officia deserunt mollit anim id est laborum.

## **#3** Integration with COOL

### #3.1 WOPI protocol

- Set up a WOPI protocol REST endpoints for exposing file information
- WOPI discovery add discovery.xml file to iframe to provide information about the capabilities the web application exposes (provided by COOL)
- Set up the host page iframe where the editing UI and the document itself will be present.
- PostMessage API interact with the iframe

### #3.1 WOPI protocol

- GetFile retrieve file
- PutFile update a file's binary contents.
- PutRelativeFile creates a new file on the host based on the current file - Save as action
- CheckFileInfo returns information about a file

#### #3.2 Authentication

- Access token is created and stored by XWiki
- Token is unique for the user, expires and the access is denied with wrong authentication token
- Used on requests

```
GET
https://<WOPI host URL>/<...>/wopi/files/<id>/contents?
access_token=<token>
```

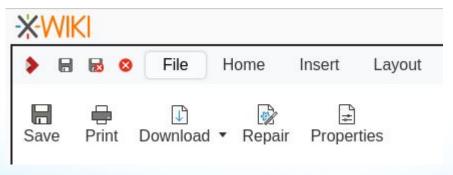

## #3.3 PostMessage API

 The Web Messaging protocol lets Office for the web frame communicate with its parent host page, and vice-versa.

```
"MessageId": "<MessageId>",
   "SendTime": "<Timestamp when message is sent>",
   "Values": {
       "<key>": "<value>"
   }
}
```

# #3.3 PostMessage API - use cases

- Token renew rely on the Doc\_ModifiedStatus message to know when to verify if token has expired and renew it if possible
- UI changes (not released) add Save and exit and Close editor buttons

#### **#4** Future work

- Make save and exit more intuitive
- Better token management

# Thank you everyone!

See you at the K1-B-3 stand
